PROFESSIONAL SUMMARY

Software Engineer with experience shipping end-to-end web & mobile products, **AI-driven** platform features across startups and scale-up environments. Comfortable working across stacks (MERN, and .NET/Angular) - strong at turning product requirements into reliable, maintainable systems and measurable outcomes across customer workflows, **automation**, and platform scalability, while operating within **CI/CD-driven** teams to ship high-quality releases.

EXPERIENCE

Software Engineer

May 2025 – Present

BitByte Club

Lahore, Pakistan

- Contributing to a cloud-based e-commerce platform delivered as microservices, supporting platform-scale metrics including **15M+** customers, **90M+** orders processed, and **800M+** annual visits.
- Focused on merchant workflows, onboarding, and platform stability across a multi-framework environment (React / Next.js / Vue).
- Built and shipped features across multiple microservices while maintaining clear service boundaries, API contracts, and versioning discipline.
- Improved deployment confidence by enhancing CI/CD pipelines (linting, type checks, Codacy, automated PR checks).

Software Engineer

June 2023 – Apr 2025

TectSoft

Lahore, Pakistan

- Led end-to-end delivery of multiple client products (web & mobile), coordinating design, engineering, and deployment activities for reliable releases.
- Owned backend and API design for client projects - improved API response times and reliability via caching and optimized DB queries; contributed to a 25% improvement in performance for key endpoints.
- Worked with cross-functional teams to translate business requirements into product feature sets and delivered 8+ projects to clients on schedule.
- Introduced code quality practices and runbook-style documentation that accelerated new-developer onboarding.

Software Engineering Fellow (Fellowship)

July 2024 – Sep 2024

HeadStarter AI

Remote, USA

- Delivered 5 AI-driven product proofs-of-concept in 5 weeks; focused on productable MVPs with clear user workflows and monitoring.
- Implemented retrieval-augmented generation (RAG) and vector search for context-aware assistants; improved information retrieval accuracy for users in pilot projects.
- Won 2 international hackathons (HeadStarter AI) among 1200+ submissions, demonstrating rapid product iteration and competitive quality.

Full Stack Developer

Nov 2022 – May 2023

Regional Plan 9 (PITB)

Lahore, Pakistan

- Delivered full-stack solutions for three startups, digitizing manual business processes and launching client-facing websites and internal apps.
- Designed multi-tenant and role-based features for a hostel management SaaS, enabling easy onboarding of new tenants (clients).
- Collaborated closely with founders to prioritize features that delivered measurable operational savings.

PROJECTS

Anamnesis — AI-Assisted Clinical Documentation System (.NET + Angular)

- Solo-built a production-grade clinical documentation platform: ASP.NET Core Web API (.NET 10) with a layered repository/service architecture, EF Core + PostgreSQL, and an Angular 22 frontend using standalone components, signals, and OnPush change detection.
- Designed a provider-agnostic AI abstraction (single interface swaps between Gemini, OpenAI, Ollama, or a deterministic Mock) powering one-click clinical note summarization and RAG-style semantic search - notes embedded into pgvector and retrieved by cosine similarity, surfacing conceptually related results beyond keyword matching.
- Implemented RBAC (Doctor/Nurse/Admin) via ASP.NET Identity + JWT, an append-only audit trail on every patient-data access, and resilient write-time embeddings (background backfill worker so AI provider downtime never blocks note creation); covered with 21 xUnit tests and a GitHub Actions CI pipeline.

Chatalyst — AI Recruitment Automation

- Built a product to automate first-stage candidate screening using voice & chat channels (Vonage) and LLM evaluation pipelines.
- Features: job listings, recruiter/applicant dashboards, job-specific questionnaires, real-time screening, SMS templates, subscription plans, and analytics for recruitment pipelines.
- Result: reduced manual screening effort and standardized triage for high-volume hiring flows.

Redbrick — Valuation Platform

- Engineered a high-throughput ETL system to process royalty statements (CSV/Excel) at scale, including streaming/parsing large Excel files (100s of MB, 100K+ rows).
- Implemented background job processing (Redis + queue workers), robust duplicate detection, multi-dimensional aggregation, and export capabilities for financial reporting.
- Designed data models and analytics to support fast grouping by statement/payor/territory/artist for reporting requirements.

VxChange — Decentralized Micro-Lending & Learning Platform

- Designed a P2P microlending experience with smart-contract-backed escrow and repayment flows; integrated wallets for on-chain interactions.
- Built accompanying education & community features (courses, quizzes, discussion feed) to improve financial literacy and borrower readiness.
- Included admin dashboards, analytics, and UX flows for loan lifecycle management and risk monitoring.

CERTIFICATES & ACHIEVEMENTS

- Microsoft Certified: AI-900 Azure AI Fundamentals.
- Winner of 2 international hackathons (HeadStarter AI).
- Published npm package `react-form-validator-mini` (70+ downloads within first week).
- Solved 200+ algorithmic problems on LeetCode.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#, C++

Frontend: React.js, Next.js, Angular, React Native, HTML5, CSS3, Tailwind, Bootstrap, Web3.js

Backend: Node.js, Express.js, ASP.NET Core Web API, REST APIs, Firebase, Supabase, Clerk

Databases: MongoDB, SQL, PostgreSQL (pgvector)

DevOps & Tools: Git, GitHub, Docker, CI/CD, Codacy, Netlify, Vercel, AWS (EC2, S3), Hostinger, Vultr

Architecture: Microservices, Monorepos, API Gateway, Layered Repository/Service Architecture

AI: AI Integrations, LLM Processing (OpenAI, Gemini, Hugging Face) & tuning, RAG, Vector databases (Pinecone, pgvector)

Other: OOP, Data Structures & Algorithms, Agile/Scrum, locize & i18n, Solidity

EDUCATION

University of Education

Bachelor of Science in Information Technology (BSIT)

Lahore, Pakistan
